

High Tech Marketing Text Analysis

Brand: Motorola Razr 2025

Group 12?

Introduction

Explain shit here philippe 8=====D

Sample Selection

We decided to go with multiple sources of text in an attempt to capture multiple perspectives on the Razr and avoid pigeon holing into one corner of the internet which may have skewed results.

Data Sources

We grabbed our shit from Reddit threads about the Motorola Razr 2025 (pain in my ass) and Youtube comments from popular tech youtubers who reviewed the Razr 2025

Sampling representation & Bias

Explain if the sample is representative of all customers, and how platform choice may skew results e.g Reddit chuds are not normal people.

Data Collection

```
fetch_reddit_thread <- function(thread_url, limit = 500, attempts = 5) {  
  api_url <- paste0(thread_url, ".json?limit=", limit)  
  response <- RETRY(  
    "GET",  
    api_url,  
    user_agent(paste0("Mozilla/5.0 (Macintosh; Intel Mac OS X 10_15_7) ",  
                      "AppleWebKit/537.36 (KHTML, like Gecko) ",  
                      "Chrome/125.0.0.0 Safari/537.36")),  
    times      = attempts,  
    pause_base = 2,  
    pause_cap  = 20,  
    terminate_on = c(400, 401, 403, 404)  
  )  
}
```

```

Exploration

Lets have a gander at the data we collected and see if theres any thing fun before we clean it up.

```

# reddit
cat("Reddit - Posts vs Comments:\n")

```

```
## Reddit - Posts vs Comments:
```

```
print(table(raw_df$type))
```

```
##
## comment      post
##      765      227
```

```
cat("\nReddit - Top Authors:\n")
```

```
##
## Reddit - Top Authors:
```

```
print(head(sort(table(raw_df$author), decreasing = TRUE), 10))
```

```
##
##      MotoAgents      Goatteebx      makaveliorlando
##      24            21            12
##      mRk0oLbReEze718      Fr0gburp3r Relative-Display-676
##      12            10            8
##      7eregrine      Fat_Stacks1      hamada625
##      7            7            7
##      Kizzy_Catwoman
##      7
```

```
cat("\nReddit - Sample Content:\n")
```

```
##
## Reddit - Sample Content:
```

```
print(head(raw_df$body, 5))
```

```
## [1] ""
## [2] "I like the Razr but that pricing is just wild. "
## [3] "Insane pricing for a phone that received so few upgrades that it rivals Samsung. "
## [4] "If RAM price increases meant a MSRP price bump was unavoidable, the least they could have done v
## [5] "Can just grab a 2025 for 799 with 1tb and free headphones. Why grab a 2026 with those little up
```

Pre-Processing

we have 2 separate data frames for reddit, and youtube, we need to merge them into one big one for the text analysis. We can add a column to indicate the source of each row and then bind them together.

Side note maybe we dont have to do all of them based on the quality of the data we get, but we should at least explain how we would do them and why they are important.

Filtering & Cleaning

```
# We're gonna filter out weird characters, emojis, and other shit we dont use
```

Tokenization

Explain how we tokenized the data and why.

Stop Words Removal

Explain how we removed stop words and why.

Stemming & Lemmatization

Frequency Filter

Synonym consolidation
